DOLOMITE APPOINTS INSTA BIOANALYTIK IN SINGAPORE AS DISTRIBUTOR FOR MICROFLUIDIC SERVICES AND CAPABILITIES

Royston, UK – 18 September 2007, Dolomite, the World's first microfluidic application centre, has appointed Insta BioAnalytik Pte Ltd in Singapore as a distributor for their microfluidic services and capabilities. Insta BioAnalytik will work with local clients helping secure new business opportunities and managing customer relations for Dolomite in the Singaporean region.

'This is an exciting development for us,' said Gillian Davis, Commercial Director of Dolomite. 'This appointment reflects the increasing level of interest we are experiencing around the world from customers interested in working with us to bring their microfluidic concepts to market. Appointing a technical company as experienced and capable as Insta BioAnalytik will be instrumental in helping to secure business and manage customer relations in their territory.'

Dolomite's key strength lies in being able to offer a complete service to customers from problem conceptualisation and feasibility testing through to full instrument design and development. This one-stop-shop model sets Dolomite apart from most other micro-fabrication firms and relies on them having employees with a broad technical knowledge, as well as expertise in microfabrication and microfluidics, together with instrument design and development capabilities.

Being able to provide local, technically competent, support to their customers is particularly important to a company, such as Dolomite, whose success lies in working closely with customers from problem conceptualisation and feasibility testing through to full instrument design and development.

'We aim to introduce latest technologies to the scientific community in Singapore', said Judy Lim, Managing Director of Insta BioAnalytik. "Dolomite, being a market leader in microfluidic technologies, this partnership has allowed us to be an active participant in advancing microfluidic development."

About The Dolomite Centre Ltd

Established in 2005 as the world's first microfluidic application centre, Dolomite is focussed on working with customers to turn their concepts for microfluidic applications into reality. With an in-depth understanding of chemistry and the life sciences, expertise in microfabrication and microfluidics, together with instrument design and development capabilities, Dolomite is enabling some of the world's top providers in fields as diverse as environmental monitoring, drug discovery and forensic science to deliver microfluidic systems to the market place. To find out more about Dolomite, please visit – www.dolomite-centre.com.

The Dolomite Centre Ltd is a subsidiary of Syrris Ltd, a market leader in the field of microreactors and productivity improvement for R&D chemistry. Syrris specialises in flow reactors, including the AFRICA, a modular system for reaction optimisation that will ultimately reduce the time taken to develop, synthesise, screen and review a chemical entity,

thus vastly speeding up the drug discovery process. For further information about Syrris, please visit – www.syrris.com.

About Insta BioAnalytik Pte Ltd

Insta BioAnalytik Pte Ltd was set up in Year 2000 as a sales and marketing office, offering laboratory instrumentations, reagents and services for the scientific and medical communities in Singapore. Partnering with leading manufacturers, they offer solutions that advance research timely and cost-effectively. To find out more about Insta BioAnalytik, please visit www.instabioanalytik.com .
